

**Instructions for Use
of
ERA® Partial Denture Impression Copings**

1. Snap the correct size ERA Partial Denture Impression Copings into the female eyelets.

2. Take a full arch impression. Use a technique that will not displace the tissue in the edentulous areas. If the ERA Impression copings remain in the female after the impression is taken remove them from the females and send them to the lab along with the impression.

Note: Be sure to protect the females left in the mouth while the partial denture is being fabricated.
